2-4 Livelihood of Populace in Wartime

1 Zaibatsu in Wartime

- How did each economic entity accommodate in the unfolding economic control under the framework of all-out mobilization?
- Under the new order movements, enterprises aspired for business development by coming to terms with the producers' responsibility system, etc.
- In contrast with medium and small businesses whose existences were not recognized in the readjustment of enterprises, it was the Zaibatsu entities that played the central role in the development of ammunition industry, as clearly indicated in the charts to follow.

- The military, at the forefront of criticizing Zaibatsu in the beginning of the 1930s, depended greatly on its business strength with the deepening controlled economy. Business managerial strength of Zaibatsu was indispensable for sustaining the war regime.
- While Zaibatsu conglomerate increased their weight in the Japanese economy toward the end of the war, it was the rapid growth of the heavy chemical industrial sector under their control that supported their expansions.
 - Zaibatsu concentrated most of their additional investment on heavy chemical industries related to military demand and supported the expansion of war-supplies output. They flexibly responded to rapid changes in industrial structure under the war footing.

Expansion in Zaibatsu's Business Investment

%

		Mitsui	Mitsubishi	Sumitomo
Finance	1937	4.3	7.7	3.6
	1941	4.5	8.0	3.7

2 Mobilized Populace

Labor movements and agrarian movements lost the foundation of their activities with the deepening war footing. Particularly, as the industrial patriotic associations were formed and employee organizations were integrated hereto, the subsistence of labor unions came to be scarcely admitted. As the result, number of labor unions, number of tenant farmers' unions, and their membership turned to a catastrophic state by the outbreak of Pacific War, as shown in the next chart.

Labor Movement and Populace Movement

			Labo	or Union	Labor Dispute		Tenant Farmers Union		Tenancy Dispute	
		No. o Unior		Union Membership	No. of Cases	No. of Enlisters	No. of Cases	No. of Enlisters	No. of Cases	No. of Enlisters

Haruhito Takeda

- It was not that, even under such situation, all movements by populace demanding for improvements in labor conditions and tenancy terms fell to the ground. But, the actual state of things was reduced to the extent that pint-sized disputes occurred on a sporadic basis.
- Under the slogan of the "national unity", the state not only mobilized peoples as military force but also requested for the mutual surveillance, or the cooperation of all noncombatant citizens toward the war framework.
- In 1943, the student mobilization was decided on, and in 1944 the formation of female volunteer corps was demanded, and furthermore, junior highschool pupils were mobilized to military plants to be involved in unaccustomed shop work.
- The war deployed unbounded mobilizations of common people: Those farmers who, being persuaded to emigrate, headed to Manchuria for settling; Korean and Chinese populace thrown in as labor force for the domestic mines and factories who were pressed/hauled coercively in many districts including Korea and Manchuria.

3 Misery of Populace's Livelihood

- Due to the production structure prioritizing the war production, the output of commodity required for the livelihood of common people was significantly constricted, which caused serious supply shortages, and the freedom of people's life as consumers was taken away under the rationing system.
- For instance, taking the quantity in 1937 as 100: Quantity of woolen fabric supplied: 23 in 1941, 8 in 1943 Quantity of cotton fabric supplied: 14 in 1941, 8 in 1943 As exemplified, the supply of civil requirements was extremely forced down and under.
 - This sort of situation took place in any nations at war in varying degrees. Still, compared to Germany, another defeated nation, the level of personal consumption expenditure was cut down much larger in Japan.

People's Livelihood in Japan and Germany Under War Regime

Take per capita food consumption per day, for example, Germany maintained 2800-2900 calories for 1939-43, and fell just slightly below 2700 even in 1945. In terms of the minimum supply of food, the amount of food consumption in Germany scarcely changed from the outbreak throughout the end of the war. Whereas in Japan, though the average level of the 1930s was maintained till '42, it fell off to 87% in '43, and in '45 down to two thirds the level. According to the U.S. Strategic Bombing Investigation Team, "Compared to Germany, the economic livelihood of citizens in Japan was in a deteriorated condition for a long time, and already reached a difficult stage prior to the beginning of the strategic bombing.

----Japanese citizens were much closer than those in Germany to the bare minimum borderline beyond which they would die from either starvation or sickness", says the Team's report. The answer to the question about this gap can be found in the difference in the regime foundations: While Nazi reins of government intentionally gave its consideration to maintaining the production for civilian use above a certain standard, as known by Hitler's proclamation "not to want any further restrictions on purchases of civilian goods," there was utterly no such policy consideration at all in Japan. Nazi regime, which, after all, was born as a movement "from below", bore off the reins of government through the election, and attained the integration with an iron fist, could not betray his own constituency. The Japanese government never took account of livelihoods of its common people.
