

## 2-D fingerprint analysis of RNase T1 products

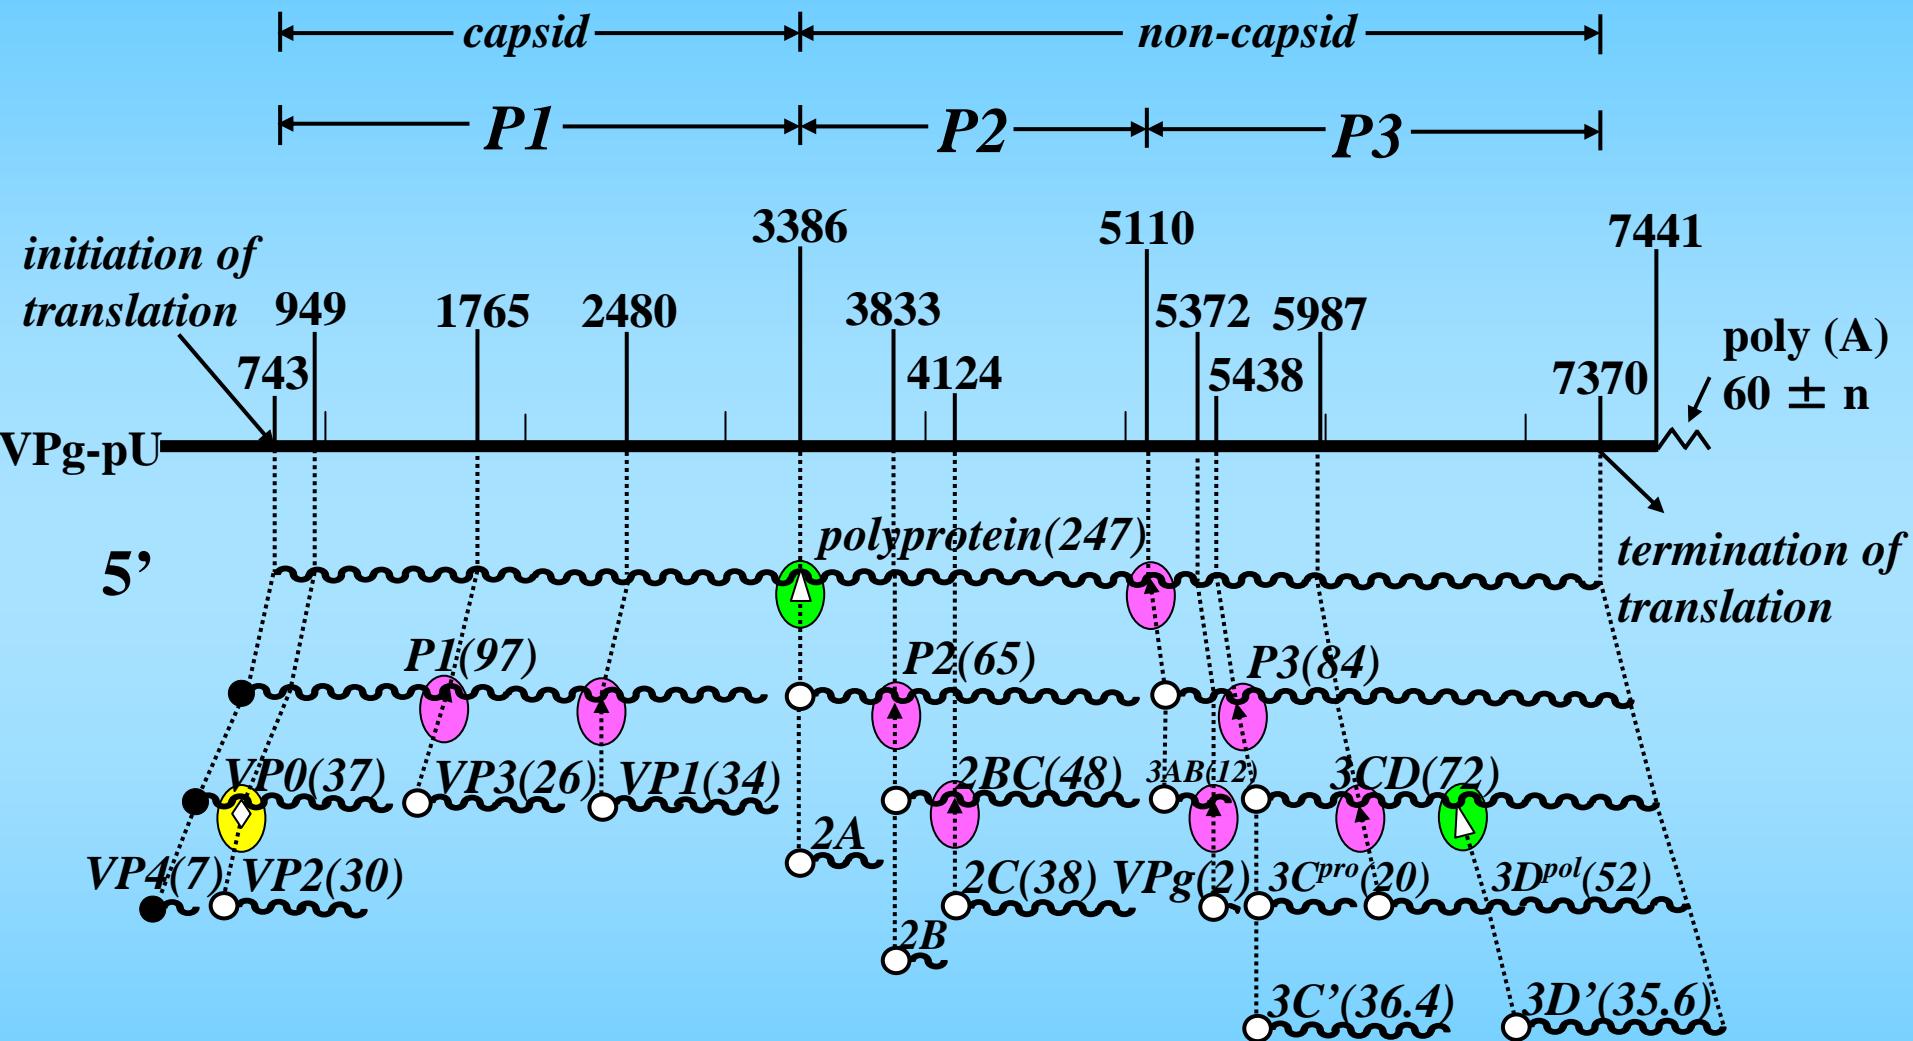

appearance of VPg (VPg : ●)

**Proposition of the VPg primer theory in the beginning of RNA production**

PV1(Sab) 7441 bases

V2(Sab) 7439 bases

PV3(Sab) 7434 bases

## Nucleotide Sequence Homology among Three Poliovirus Serotype Genomes

5'Non  
coding

P1  
(Coat)

This diagram shows the P1 genome with genes VP4, VP2, MP3, and VP1. The genome starts at position 1100 and ends at 3360. The VP4 gene is from 1100 to 1300, VP2 from 1300 to 1400, MP3 from 1400 to 1800, and VP1 from 1800 to 3360. A vertical scale on the right indicates homology from 100% (top) to 700% (bottom).

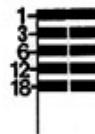

P2  
(X)

This diagram shows the P2 genome with genes 3b, 5b, and X. The genome starts at position 3400 and ends at 15000. The 3b gene is from 3400 to 3600, 5b from 3600 to 3800, and X from 3800 to 4100. A vertical scale on the right indicates homology from 100% (top) to 1000% (bottom).

P3  
(Rep)

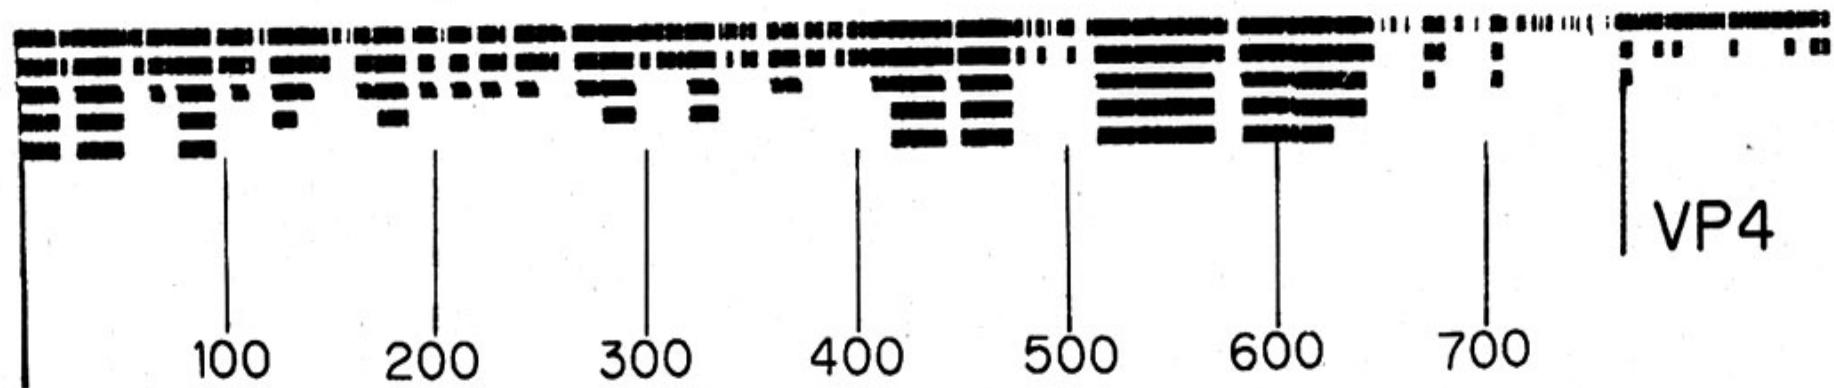

This diagram shows the P3 genome with genes 1b, VPg, 2b, and 4b. The genome starts at position 15200 and ends at 18200. The 1b gene is from 15200 to 15400, VPg from 15400 to 15600, 2b from 15600 to 15800, and 4b from 15800 to 16000. A vertical scale on the right indicates homology from 100% (top) to 1000% (bottom).
